

Handsfree Checkout

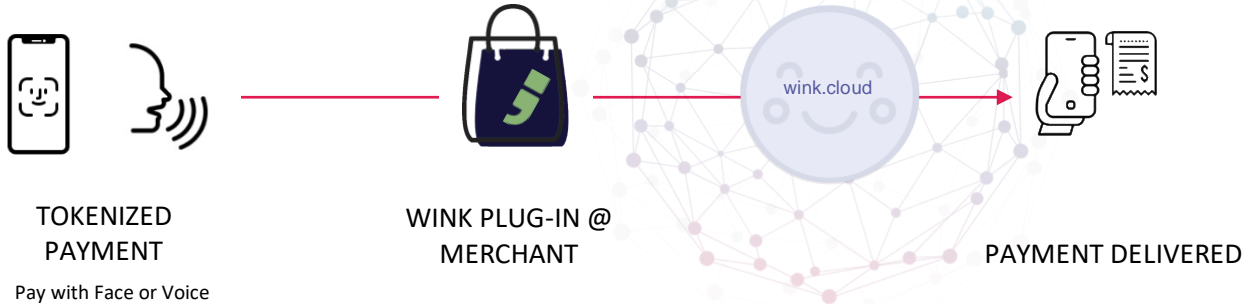

Commerce Reimagined

Wink is a unique biometrics multifactor identity and payments platform that delivers a true password-less and handsfree login and checkout experience to merchants.

- Uniquely combines face- and voice-based user recognition and payments acceptance through a plug-in that is easy to integrate.
- Delivers omni-channel login and checkout experience with an unparalleled combination of speed, convenience, and security.
- Dramatically improves conversions and eliminates cart abandonments as consumers simply smile to check-out, making long checkout forms and forgotten passwords a thing of the past.

Biometric Checkout & Payments

- Wink identifies and authenticates user with strong voice and face recognition using the camera on a user device (or merchant device like SmartPOS or Kiosk or self-checkout station)
- All cart data is automatically retrieved from user's Wink profile from wink.cloud (email, phone, address, delivery preference, payment token)
- Wink sends payment to merchant's payment processor
- Merchant processes the order upon receiving authenticated payment confirmation via Wink

Convenience & Speed

Cloud-based Device, Face and Voice recognition coupled with a unique AI/ML capability to handle strong biometric multi-factor authentication while solving for all situations (masks, low resolution, bad lighting etc.)

Privacy & Anonymity

Our patented one-way anonymous encryption ensures full privacy protection as the unique Wink ID represents the user's face and voice data as a 3D model of numbers and characters that cannot be decrypted. Users are in complete control of which website/app has access

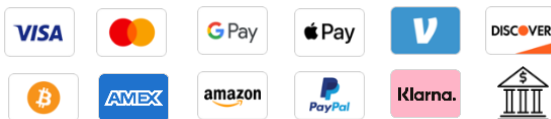

Security

Unique biometric tokenization prevents identity theft as passwords and card numbers are eliminated from the checkout experience
